Pumps UK Ltd

1

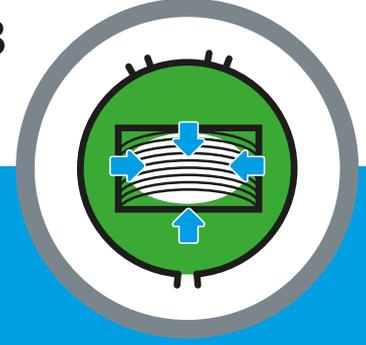

Timber loaded into treatment vessel. Initial vacuum applied and the timber cells are evacuated of air. Vacuum held.

2

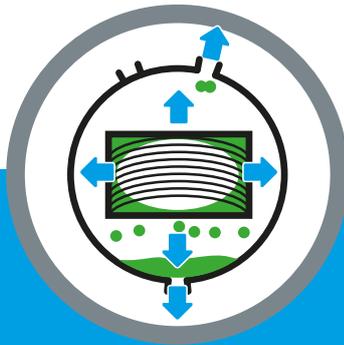

Hydraulic pressure applied, forcing the preservative deep into the structure of the timber.

3

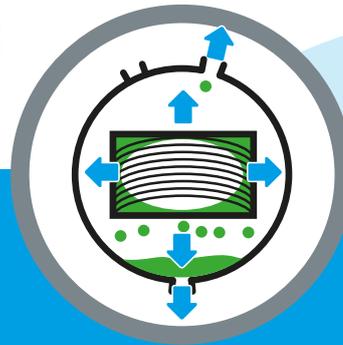

Cylinder flooded under vacuum with TANALITH wood preservative brown colourant if required.

4

Final vacuum extracts excess preservative solution, which is pumped back to storage.

5

Final vacuum extracts excess preservative solution, which is pumped back to storage.
